This specific article was originally published by Counsellingresource Research Staff on April 25, 2011, and was last reviewed or updated by Dr. Greg Mulhauser, Managing Editor, on December 20, 2014.

Geriatric Depression Scale 15 Item Version GDS 15

Geriatric depression is the most common mental health problem in the elderly and is associated with a significant burden of illness that affects patients, their families, and communities and takes an economic toll as well. Prevalence studies suggest that 14 to 20% of the elderly living in the community experience depressive symptoms, with higher rates among the elderly in hospital settings.

Although the appraisal of guidelines for research and evaluation agree, the instrument described in chapter 1 of the original guideline document evidence-based geriatric nursing protocols for best practice (4th ed.) was created to critically appraise clinical practice guidelines. The process and criteria can also be applied to the development and evaluation of clinical practice protocols.
